Acoustic Duo 2

battery-free, active magnetic soundhole pickup for acoustic guitar

The Mi-Si Acoustic Duo system combines the revolutionary new **Flux2** active, battery-free magnetic soundhole pickup for acoustic guitar with the Mi-Si Power Charger. The Flux2 pickup is a single coil pickup based on low inductance planar coil design. Its got broad frequency response and at the same time its virtually hum and noise free. The Flux2 is an ACTIVE magnetic pickup, so you don't have to worry about the cable capacitance or input impedance of your system – the pure and natural sound of your acoustic guitar will not be altered.

Powering up the Flux2 for 60 seconds with the Mi-Si Power Charger will provide you with up to 8 hours of performance time.

MSRP (US dollars) \$205.85

Acoustic Trio

Simple Jack & power charger with L.R. Baggs acoustic guitar pickup

The Mi-Si Acoustic Trio system features an active, battery-free preamp designed specifically to work with the L.R. Baggs undersaddle acoustic guitar pickup.

The preamp for this system uses Mi-Si's **custom piezo linearization scheme** – allowing for the most truthful and accurate sound from the pickup.

All you have to do is power up for 60 seconds using the Mi-Si Power Charger, providing you with up to 16 hours of performance time.

MSRP (US dollars) \$149.85

Acoustic Trio Vio/Mando

active battery-free preamp & power charger with Kremona pickup

The Mi-Si Acoustic Trio Vio/Mando system features an active, battery-free preamp designed specifically to work with the Kremona piezo pickup for violin and mandolin.

The preamp for this system also uses Mi-Si's **custom piezo linearization scheme**. The extremely compact active battery-free preamp is built into a 1/4" Carpenter Jack.

Power up for 60 seconds using the Mi-Si Power Charger and play for up to 8 hours.

MSRP (US dollars) \$199.85

Align

the world's most flexible battery-free preamp

The Align is the single most flexible, compact, and lightweight battery-free preamp currently manufactured. The board's thickness is just 30 mils thick versus that of the more traditional circuit board that is 62 mils thick. It comes standard with active bass, treble, and volume controls and can be installed virtually anywhere within the instrument.

Amazingly, Align can be bent up to a radius of 40 mm. There is no danger of damaging components because they are all sitting on stiffened sections of the Align directly under the pots.

Designed to work with L.R. Baggs Element pickup, Align can easily be tweaked to work with any brand pickup. For more "flexibility" in the placement, the board can be cut into two or three sections, allowing for even more complicated installations. It is the perfect choice for amplifying ukuleles, mandolins, violins, and other smaller bodied acoustic instruments.

And like any other Mi-Si preamp, Align requires no batteries and it takes only 60 seconds to charge. A single charge will net you 8 hours of active preamp power.

MSRP (US dollars) \$164.95
